WEB DEVELOPMENT INTERNSHIP PRESENTATION

PRODIGY INFOTECH

Student Details

Name: Amar Chand_x000B_Roll No.: 25SCS1003005363_x000B_Program: B.Tech CSE_x000B_Specialisation: Cloud Computing_x000B_Semester: 3rd Semester_x000B_Academic Year: 2026–27

Internship Details

Domain: Web Development
Duration: 1 August 2026 – 30 August 2026
Projects Completed: 5
Focus: Responsive & Interactive Web Applications

INTERNSHIP OVERVIEW

Organisation

Prodigy InfoTech

Role

Web Development Intern

Duration

1 August 2026 – 31 August 2026

Domain

Hands-on development with HTML, CSS and JavaScript, concentrating on adaptable layouts and useful interactive features.

Work Completed

The internship involved five assignments covering page design, JavaScript interactions, browser games, portfolio presentation and weather-data display.

OBJECTIVES

- Apply front-end concepts through practical web development tasks.
- Build a stronger working knowledge of HTML, CSS and JavaScript.
- Design pages that remain clear and usable across screen sizes.
- Use JavaScript to respond to user actions and manage page behaviour.
- Explore API requests and data display through the weather project.
- Practise troubleshooting and completing projects systematically.

TECHNOLOGIES & TOOLS USED

HTML5

Provided the structure for webpages and organized each application's content.

CSS3

Controlled the visual style, spacing and layouts across screen sizes.

JavaScript

Handled user actions, application rules and changing page content.

VS Code

Used to write, edit and organize the project's source files.

GitHub

Kept project source files online and easier to manage.

Weather API

Provided weather data for the application to display.

Canva

Helped prepare presentation slides and visual materials.

MS Office

Supported report writing, slide preparation and spreadsheet tasks.

PROJECTS COMPLETED

01 **Responsive Landing Page**

02 **Stopwatch Web Application**

03 **Tic-Tac-Toe Web Application**

04 **Personal Portfolio Website**

05 **Weather Application**

RESPONSIVE LANDING PAGE

- Built the page structure and styling with HTML, CSS and JavaScript.
- Arranged navigation links and distinct content areas.
- Kept the interface simple and easy to explore.
- Adjusted the layout to suit different screen widths.

PROJECT 01

STOPWATCH WEB APPLICATION

- Created a browser-based timer controlled with JavaScript.
- Added controls to start, pause, reset and record lap times.
- Used timing logic and event handling to manage the display.
- Practised linking user input with updates to the timer.

PROJECT 02

TIC-TAC-TOE WEB APPLICATION

- Built a playable Tic-Tac-Toe board using HTML, CSS and JavaScript.
- Programmed turns to alternate between the two symbols.
- Checked winning combinations and provided a way to restart.
- Designed the board to make moves easy to follow.

PROJECT 03

PERSONAL PORTFOLIO WEBSITE

- Created a portfolio site with HTML, CSS and JavaScript.
- Organized details into About, Skills, Projects, Education and Contact areas.
- Made navigation adaptable and added interaction to page elements.
- Presented academic background and technical work in a structured format.

PROJECT 04

WEATHER APPLICATION

- Connected the weather interface to an external weather service.
- Enabled users to look up conditions by entering a city.
- Displayed returned details such as temperature and weather conditions.
- Practised requesting API data and updating the page with the response.

PROJECT 05

KEY LEARNINGS

- Became more comfortable using HTML, CSS and JavaScript in projects.
- Practised combining adaptable layouts with interactive page elements.
- Developed a clearer understanding of event handling and program flow.
- Explored how an external API supplies data to a web application.
- Used GitHub to keep project code organized and accessible online.
- Built confidence in testing changes, finding errors and refining projects.

INTERNSHIP OUTCOME

Technical Growth

Completing the assignments helped me connect front-end concepts with practical work and use HTML, CSS and JavaScript to build browser-based projects.

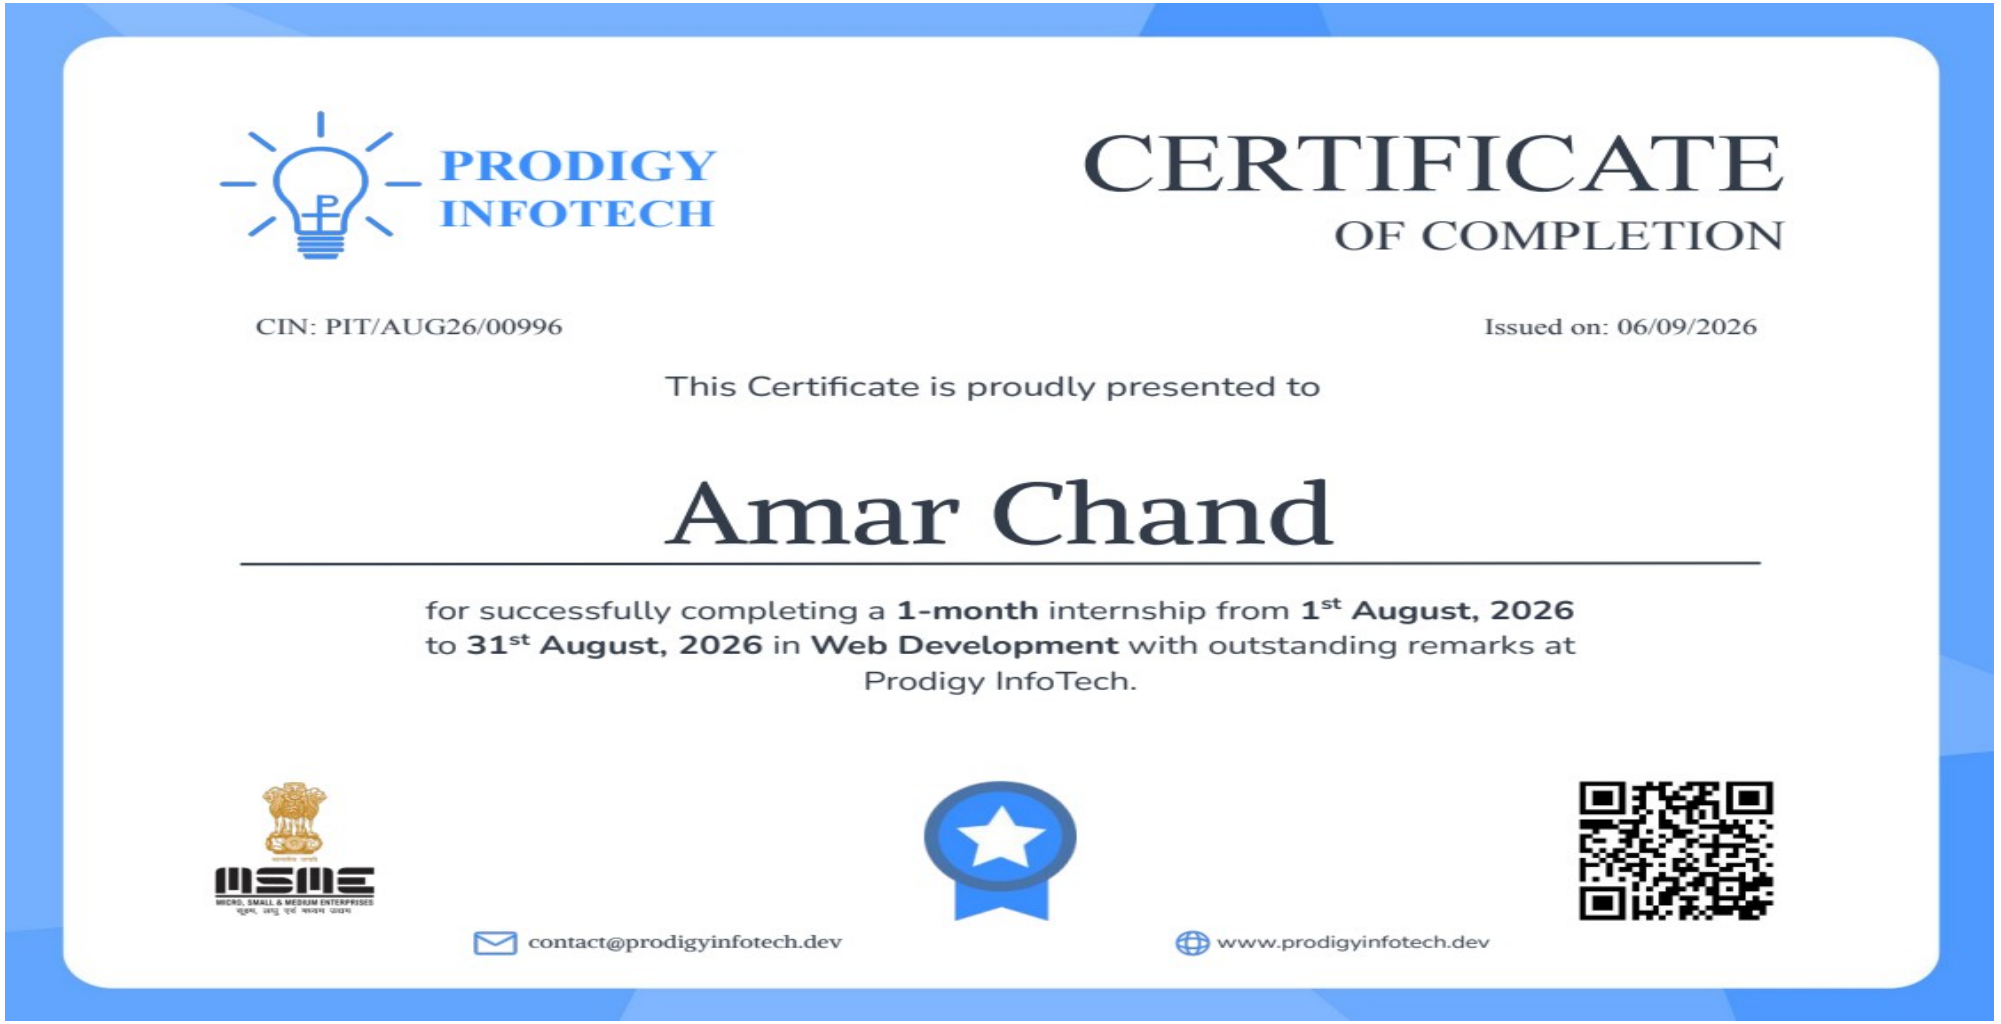

Professional Growth

Developing several applications gave me practice in organizing tasks, checking functionality and improving the result after testing.

Overall Outcome

The projects gave me a useful starting point in web development and encouraged me to continue learning about Cloud Computing, DevOps and modern software tools.

INTERNSHIP COMPLETION CERTIFICATE

Thank You
