1. CANDIDATE'S DECLARATION

I, **AMAR CHAND** do hereby declare that the internship report titled **"WEB DEVELOPMENT INTERNSHIP"** has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in CSE. All the references have been quoted and I have not taken as such any material from any other source. I affirm to you that this report is my own and has not been submitted to any other institute for any degree/ diploma requirement and further I shall be solely responsible for any kind of copyright violation in this regard.

Roll No. **25SCS1003005363**

2. ACKNOWLEDGEMENT

I would like to express my sincere gratitude to everyone who supported and guided me throughout my Web Development Internship at Prodigy InfoTech.

This internship provided me with an opportunity to strengthen my practical knowledge of web development and apply my understanding of HTML, CSS and JavaScript through practical projects.

I am thankful to IILM University, the faculty members and Prodigy InfoTech for providing me with this learning opportunity. I am also grateful to my parents for their continuous support and encouragement throughout this internship.

The experience gained during this internship has helped me improve my practical web development skills, problem-solving ability and confidence in working on web-based projects.

Student Name **AMAR CHAND**

Roll No. **25SCS1003005363**

3. INTERNSHIP COMPLETION CERTIFICATE

4. PROJECT DESCRIPTION

4.1 INTRODUCTION

The Web Development Internship at Prodigy InfoTech offered an opportunity to apply theoretical knowledge to practical web development tasks. As part of the internship, I worked on five projects using HTML, CSS, and JavaScript, with each project focusing on a different aspect of front-end development.

The projects included a Responsive Landing Page, Stopwatch Web Application, Tic-Tac-Toe Web Application, Personal Portfolio Website, and Weather Application.

Working on these applications helped me explore webpage design, responsive layouts, interactive elements, and the use of external APIs. Each project was implemented based on its assigned requirements, followed by testing in a web browser to check its appearance and functionality.

Overall, the internship provided practical experience in building web applications and helped me develop a better understanding of how front-end technologies work together.

4.2 ORGANIZATION PROFILE

Prodigy InfoTech was the organization under which I completed my Web Development Internship. I participated in its educational internship program as a Web Development Intern, where the primary focus was on learning through practical assignments.

The program involved developing multiple web-based projects using HTML, CSS, and JavaScript. These assignments provided an opportunity to apply programming concepts, experiment with interface design, and implement features according to the requirements of each task.

Through this experience, I gained exposure to the basic workflow of web development, from writing code and designing interfaces to testing completed applications.

4.3 PROBLEM STATEMENT

The main task of the internship was to develop several web applications that fulfilled specific functional and design requirements. Each application presented a different challenge, requiring an appropriate combination of webpage structure, visual styling, and programming logic.

The assigned work included designing a responsive landing page, building a functional stopwatch, implementing a Tic-Tac-Toe game, developing a personal portfolio website, and creating a Weather Application capable of retrieving weather information through an API.
The key challenge was to ensure that each project performed its intended function while remaining easy to understand and use. This required selecting suitable HTML elements, applying CSS effectively, and writing JavaScript code to handle user actions and application behaviour.

4.4 PROJECT OBJECTIVES

1. To apply fundamental web development concepts in practical projects.
2. To improve proficiency in HTML, CSS, and JavaScript.
3. To design web interfaces that are accessible, responsive, and easy to navigate.
4. To implement interactive features using JavaScript programming.
5. To translate project requirements into working web applications.
6. To learn the basic process of retrieving and displaying external data through API integration.
7. To develop logical thinking and debugging skills while solving programming problems.
8. To gain experience in testing, organizing, and publishing web development projects.

4.5 SCOPE OF THE PROJECT

The internship focused on developing front-end web applications using standard web technologies, along with basic integration of external services where required.

The five projects covered a range of practical concepts. The landing page focused on layout and navigation, the stopwatch involved time-based functionality, the Tic-Tac-Toe application required game logic, the personal portfolio presented information through a structured website, and the Weather Application demonstrated the use of an external API to obtain weather data.

These projects helped establish a foundation in front-end development and provided experience with different types of web interfaces. The applications can be extended in the future with more advanced functionality, improved accessibility, enhanced responsiveness, and additional features.

4.6 TECHNOLOGIES AND TOOLS USED

4.6.1 HTML5

HTML5 was used to create the basic structure and content of the web pages. It was used for headings, paragraphs, buttons, forms, navigation elements and other webpage components.

4.6.2 CSS3

CSS3 was used for styling and designing the web applications. It was used to create layouts, colors, spacing, responsive designs, cards, buttons, animations and visual effects.

4.6.3 JavaScript

JavaScript was used to add interaction and functionality to the web applications. It was used for features such as stopwatch controls, Tic-Tac-Toe game logic, interactive portfolio elements and fetching weather information.

4.6.4 Weather API

A weather API was used in the Weather Application to retrieve current weather information. The application fetches weather data based on the searched city or the user's current location and displays the information on the webpage.

4.6.5 Visual Studio Code

Visual Studio Code was used as the code editor for creating and editing the HTML, CSS and JavaScript files.

4.6.6 GitHub

GitHub was used to store and manage the project source code and to make the completed projects available online.

4.7 SYSTEM ARCHITECTURE

The developed applications primarily follow a client-side web application architecture. HTML provides the structure of the application, CSS provides the visual design and responsive layout, and JavaScript handles the interaction and application logic.

In the Weather Application, JavaScript communicates with the weather API to retrieve weather information. The received data is then processed and displayed on the webpage.

4.8 METHODOLOGY

The internship projects were developed step-by-step according to the requirements of each assigned task.

Step 1 – Understanding Requirements:
The requirements of each task were studied before starting development.

Step 2 – Creating Structure:
HTML was used to create the basic structure of each application.

Step 3 – Designing the Interface:
CSS was used to style the applications, create layouts and improve responsiveness and visual appearance.

Step 4 – Adding Functionality:
JavaScript was implemented to provide the required interactive functionality.

Step 5 – API Integration:
The Weather Application was connected to a weather API to retrieve weather information.

Step 6 – Testing:
The applications were opened and tested in the browser to verify their functionality.

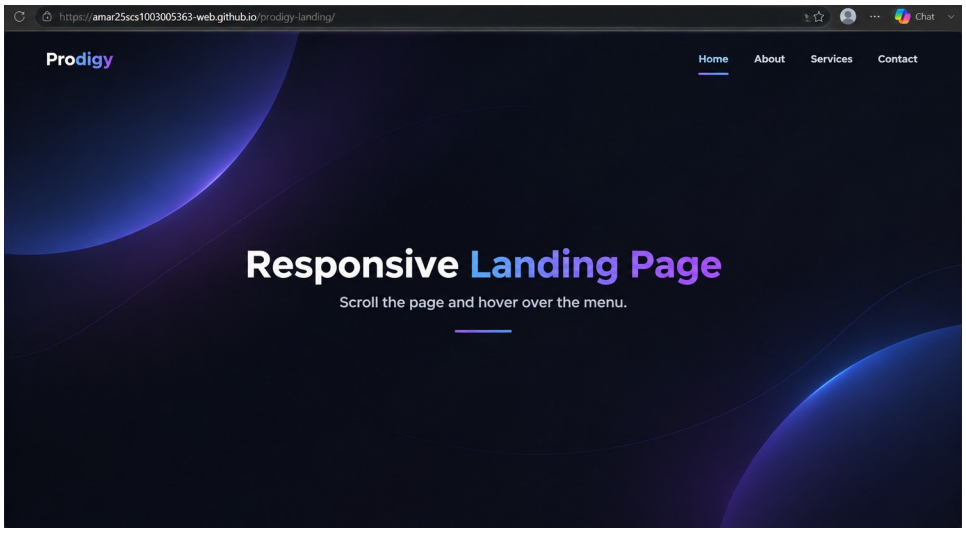

Step 7 – Deployment/Submission:
The completed project files were uploaded to GitHub for project management and submission.

4.9 EXPECTED OUTCOMES

Task 1 – Responsive Landing Page

A responsive landing page was developed using HTML, CSS and JavaScript. The page includes a navigation menu, content sections and interactive styling. The project demonstrates responsive webpage design and navigation interaction.

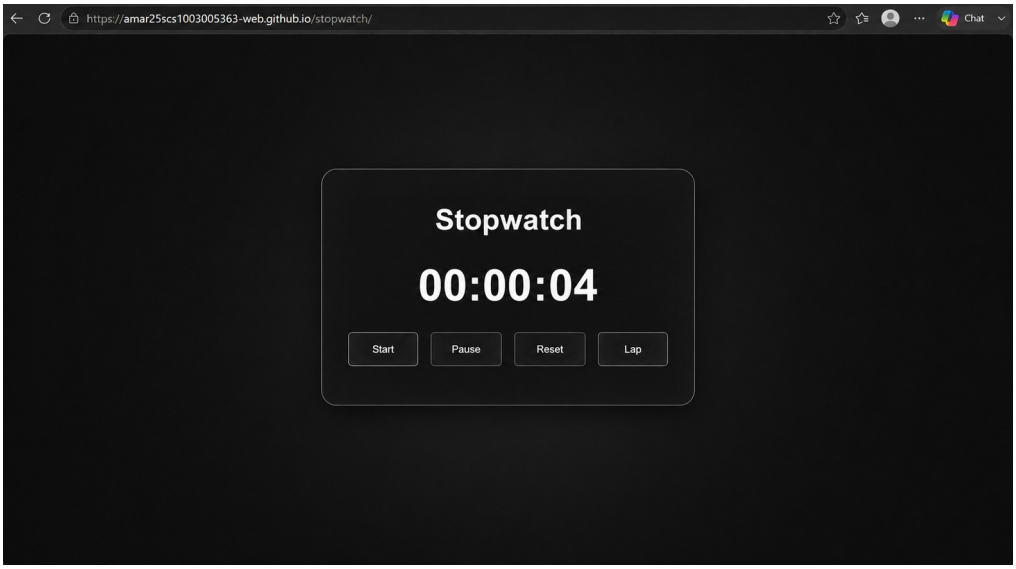

Figure 1 : Responsive Landing Page

Task 2 – Stopwatch Web Application

A Stopwatch Web Application was developed using HTML, CSS and JavaScript. The application provides stopwatch functionality through interactive controls and demonstrates the use of JavaScript for time-based interaction.

Figure 2 : Stopwatch Web Application

Task 3 – Tic-Tac-Toe Web Application

A Tic-Tac-Toe Web Application was developed using HTML, CSS and JavaScript. The application provides an interactive game interface and demonstrates the implementation of game logic and user interaction using JavaScript.

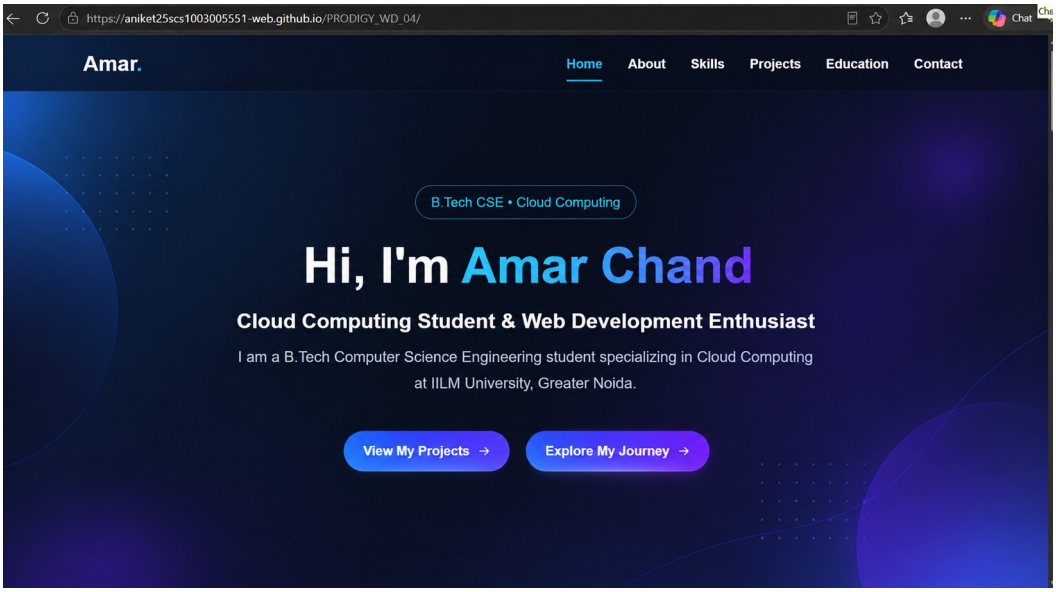

Figure 3 : Tic-Tac-Toe Web Application

Task 4 – Personal Portfolio Website

A Personal Portfolio Website was developed to present personal information, skills, projects and educational details in a responsive interface. The website was designed using HTML and CSS with JavaScript-based interactions and animations.

Figure 4 : Personal Portfolio Website

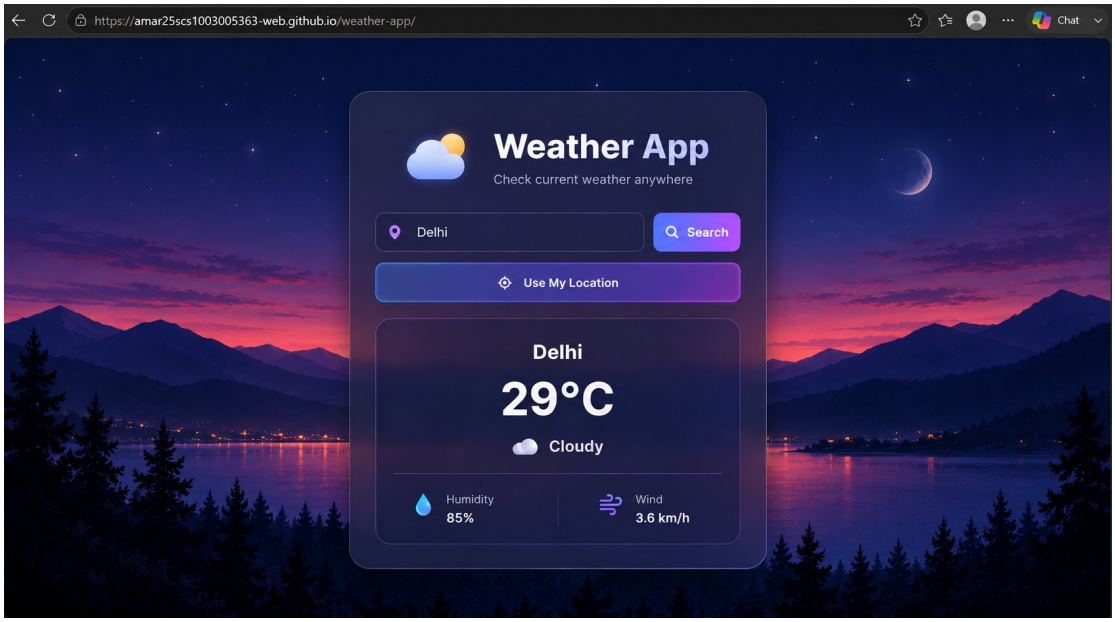

Task 5 – Weather Application

A Weather Application was developed using HTML, CSS and JavaScript. The application allows the user to search for a city and retrieve current weather information through a weather API. It also provides an option to use the user's current location.

The application displays information such as temperature, weather condition, humidity and wind speed.

Figure 5 : Weather Application

Overall Outcome

The completion of these five projects provided practical experience in developing web-based applications using HTML, CSS and JavaScript. The projects helped in understanding responsive design, user interaction, JavaScript functionality and basic API integration.

PRODIGY INFOTECH

OFFER LETTER

31 July, 2026

CIN: **PIT/AUG26/00996**

Dear **Amar Chand,**

We are delighted to offer you the position of **Web Development Intern** at Prodigy InfoTech. As an intern, you will have the opportunity to work on real-world projects, build practical skills, and contribute meaningfully to our team. We are excited to welcome you aboard and look forward to supporting your professional growth throughout this journey.

The internship is scheduled to commence on the **1st August, 2026** and will conclude on the **31st August, 2026**, resulting in a 1-month duration for the program.

Please note that this program is intended solely for educational purposes and does not constitute an offer of employment. Successful completion of the internship does not guarantee future employment with Prodigy InfoTech.

As part of the program, you agree to adhere to all company policies and guidelines applicable to non-employee interns. This letter outlines the complete understanding between you and Prodigy InfoTech regarding your internship and supersedes any prior discussions or agreements. Any modifications must be made in writing and signed by both parties.

We look forward to your participation in the internship program and wish you a rewarding and enriching experience with us.

Sincerely,

Prodigy InfoTech
